

Transforming Building Inspections

BuildingReporter automates the inspection forms used by building inspectors at various stages of construction.

Developed using the National Building Inspection Code, BuildingReporter provides the building inspector with visual alerts as they track the stages of the construction project.

BuildingReporter is ideal for small and medium sized municipalities across Canada.

Visual Alerts/Risk Reduction

Easily recognizable colors (red, yellow, and green) that warn of issues that are outstanding from previous inspections . Allows different inspectors to perform follow ups and not miss any important issues.

Simple and Complex Forms

The National Building Inspection Code is used in the development of all the inspection forms used at all stages of the construction process.

Simplified forms for the monitoring of complex buildings rather than performing specified inspections. Simplified forms for the monitoring of the construction of complex buildings, ensuring compliance with the key principles of the MIABC's Core Building Bylaw Provisions.

Project Tracking

BuildingReporter provides the inspector access to all phases of the construction project, from the preliminary inspection right through to occupancy.

BuildingReporter has the ability to access any of the active permits rather than just the ones that are loaded into the Blackberry, to see the status of construction or missing information.

BuildingReporter Advantages

Easy to follow check lists

Instant issue notification

Full page onsite printing

Reduced paper usage during the inspection process

Simplified forms

Easily recognizable warning colours (green, yellow and red)

Access to all active permits
